1. Download and extract the MT4 ZIP

Download TRIDENT_FX_MT4.zip from our website. MT4 and MT5 use separate packages.

In Windows, right-click the ZIP and choose Extract All. Select a folder and confirm Extract. Open the extracted folder, not the compressed contents.

Inside TRIDENT_FX, open MT4/TRIDENT_FX_MT4.ex4. Documentation is under Manuales (Manuals). Keep the ZIP as an installation backup; do not put it in MetaTrader.

Start on demo. Keep AutoTrading off while preparing charts and inputs. File > Open Data Folder > MQL4 > Experts is the destination for the .ex4 file.

Menu equivalents: Archivo = File; Abrir carpeta de datos = Open Data Folder; Asesores Expertos = Expert Advisors; Actualizar = Refresh; Observación del mercado = Market Watch; Aceptar = OK.

Other labels: Parámetros de entrada = Inputs; Común = Common; Operaciones = Trade; Bajo = Low; Licencia vigente = Valid license; TRADING NO PERMITIDO = Trading not allowed.

2. Copy the EA into MetaTrader 4

Copy TRIDENT_FX/MT4/TRIDENT_FX_MT4.ex4 from the extracted package.

In the MT4 installation you intend to use, choose File > Open Data Folder. Each installation can have its own data folder.

Open MQL4 > Experts and paste TRIDENT_FX_MT4.ex4 there, not in Indicators. Do not copy the ZIP.

Return to MetaTrader. Keep AutoTrading off and continue with Navigator on the next page. An .ex5 file belongs to MT5 and does not run in MT4.

Menu equivalents: Archivo = File; Abrir carpeta de datos = Open Data Folder; Asesores Expertos = Expert Advisors; Actualizar = Refresh; Observación del mercado = Market Watch; Aceptar = OK.

Other labels: Parámetros de entrada = Inputs; Común = Common; Operaciones = Trade; Bajo = Low; Licencia vigente = Valid license; TRADING NO PERMITIDO = Trading not allowed.

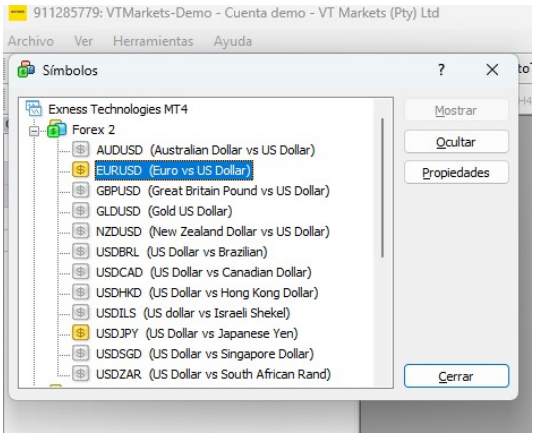

3. Refresh Navigator and show the pairs

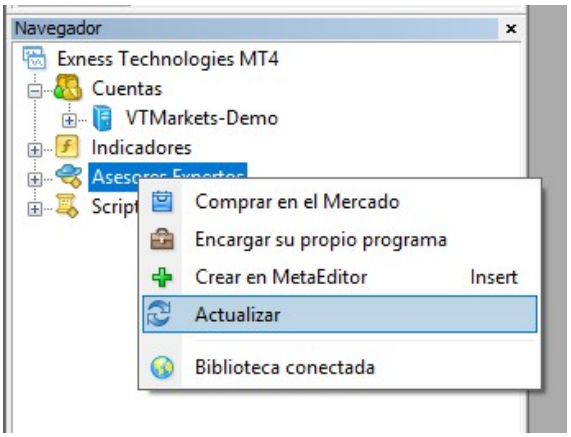

Open Navigator (Ctrl+N). Right-click Expert Advisors > Refresh and find TRIDENT_FX_MT4.

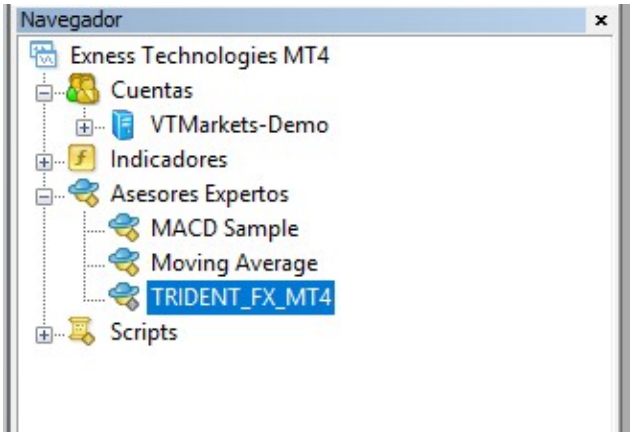

Open Symbols (Ctrl+U), expand the currency group, select each pair and choose Show if needed. Base portfolio: EURUSD, AUDCAD, AUDNZD and CADCHF.

Use complete broker symbols, including suffixes. The screenshots use -VIP. If Show is disabled and Hide is available, that symbol is already visible.

Actual terminal screenshots. Spanish labels are retained; see the English menu equivalents below.

Menu equivalents: Archivo = File; Abrir carpeta de datos = Open Data Folder; Asesores Expertos = Expert Advisors; Actualizar = Refresh; Observación del mercado = Market Watch; Aceptar = OK.

Other labels: Parámetros de entrada = Inputs; Común = Common; Operaciones = Trade; Bajo = Low; Licencia vigente = Valid license; TRADING NO PERMITIDO = Trading not allowed.

4. Open H1 charts and configure the EA

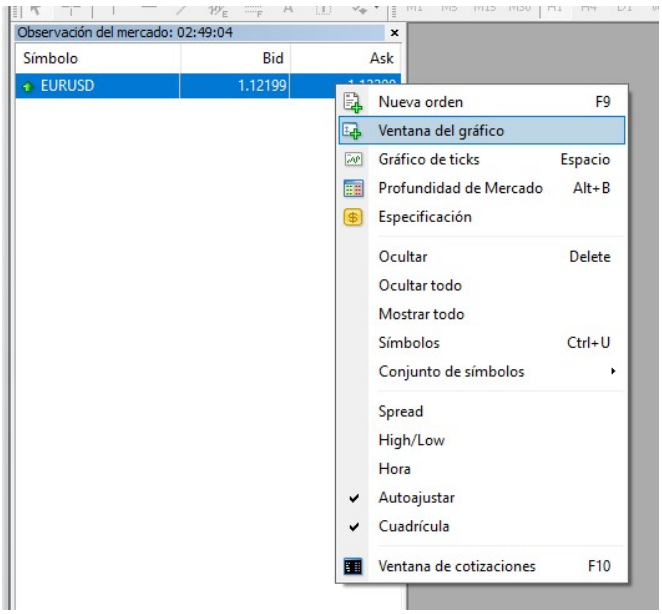

In Market Watch, right-click a symbol > Chart Window. Select H1; Ctrl+G hides the grid. Drag TRIDENT_FX_MT4 from Navigator to the chart.

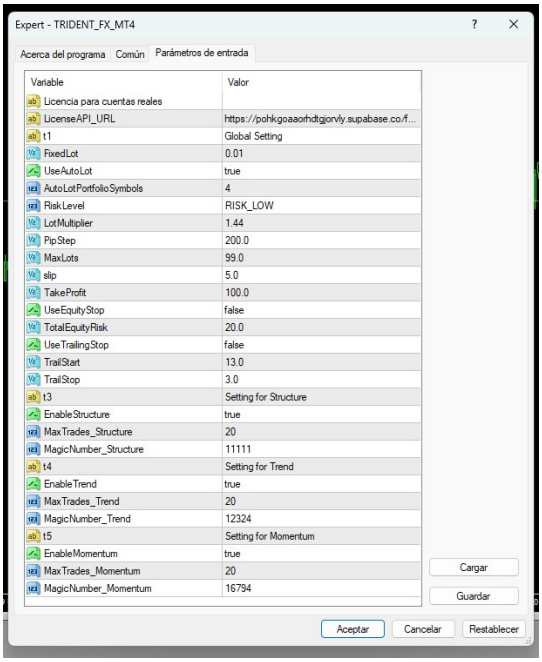

Review inputs before accepting: UseAutoLot=true; AutoLotPortfolioSymbols=4; RiskLevel=RISK_LOW; all three engines enabled.

This demo uses 48,000 standard USD. USC balances are cent units, not standard dollars; check account units and contract before comparing capital.

FixedLot does not set the initial base while AutoLot is enabled. Global protection and trailing are off in this example. Read the shared manual for their operation.

Actual terminal screenshots. Spanish labels are retained; see the English menu equivalents below.

Menu equivalents: Archivo = File; Abrir carpeta de datos = Open Data Folder; Asesores Expertos = Expert Advisors; Actualizar = Refresh; Observación del mercado = Market Watch; Aceptar = OK.

Other labels: Parámetros de entrada = Inputs; Común = Common; Operaciones = Trade; Bajo = Low; Licencia vigente = Valid license; TRADING NO PERMITIDO = Trading not allowed.

5. Enable both trading permissions

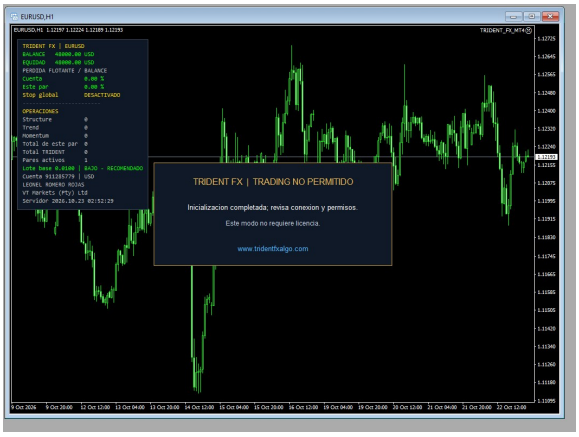

The EA permission and platform-wide AutoTrading button are separate. Review account, capital and inputs first.

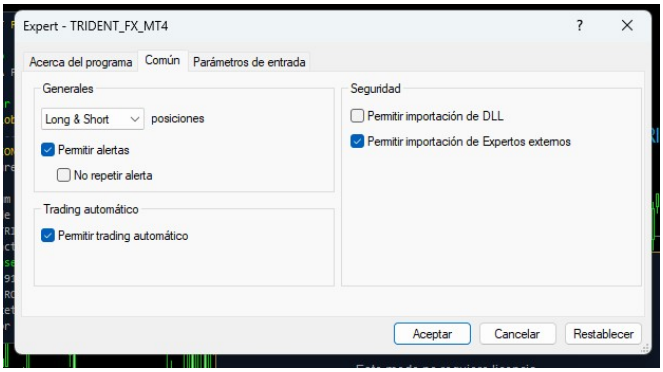

F7 > Common > Allow live trading, then OK. Enable the platform AutoTrading button when ready. This permission is required on demo too.

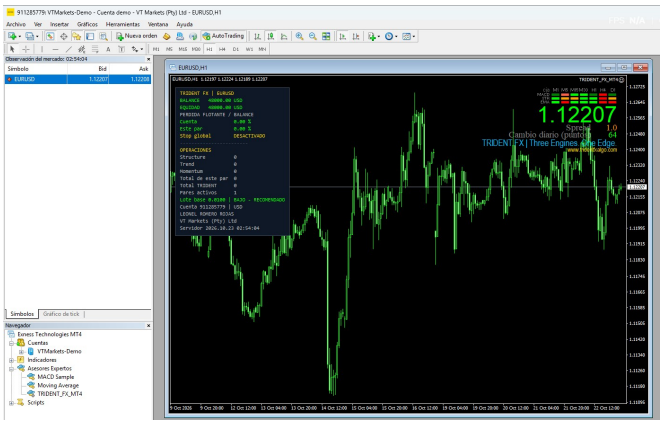

With a permission off, TRADING NO PERMITIDO means trading is not allowed. In the documented demo the notice cleared after both permissions were enabled. No commercial key was needed.

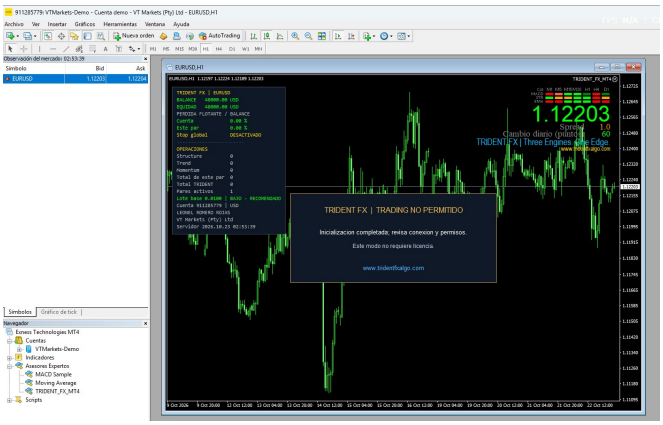

Enabling trading does not guarantee an immediate entry. If a warning persists, read it and check Experts.

Actual terminal screenshots. Spanish labels are retained; see the English menu equivalents below.

Menu equivalents: Archivo = File; Abrir carpeta de datos = Open Data Folder; Asesores Expertos = Expert Advisors; Actualizar = Refresh; Observación del mercado = Market Watch; Aceptar = OK.

Other labels: Parámetros de entrada = Inputs; Común = Common; Operaciones = Trade; Bajo = Low; Licencia vigente = Valid license; TRADING NO PERMITIDO = Trading not allowed.

6. Check the running portfolio

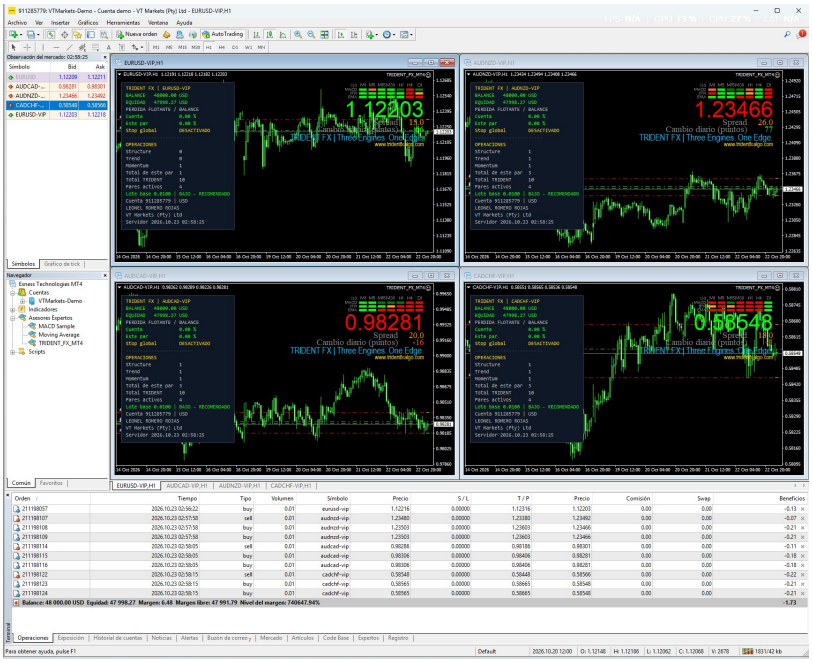

Repeat on the other three H1 charts with AutoLot on, four planned symbols and LOW. Arrange windows using Window > Tile.

The screenshot contains ten positions: one on EURUSD and three on each other pair. This is an observed state, not a promised trade count.

Structure, Trend and Momentum show engine counts. Total de este par is this symbol; Total TRIDENT is the recognized portfolio; Pares activos shows four here.

Chart lines identify entries and T/P targets. In Trade, check symbol, volume, entry, T/P and floating result by ticket. Balance is booked results; equity includes floating results. 0.00% may be a small rounded amount.

Actual terminal screenshots. Spanish labels are retained; see the English menu equivalents below.

Menu equivalents: Archivo = File; Abrir carpeta de datos = Open Data Folder; Asesores Expertos = Expert Advisors; Actualizar = Refresh; Observación del mercado = Market Watch; Aceptar = OK.

Other labels: Parámetros de entrada = Inputs; Común = Common; Operaciones = Trade; Bajo = Low; Licencia vigente = Valid license; TRADING NO PERMITIDO = Trading not allowed.

7. Live account: allow the URL

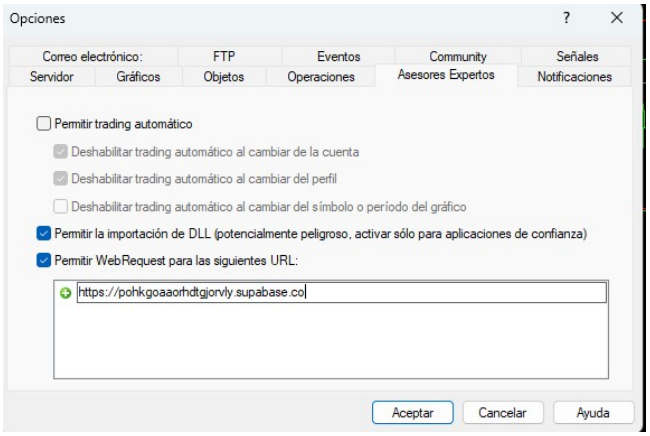

Keep trading off during setup. Tools > Options > Expert Advisors > Allow WebRequest for listed URL: add https://pohkgoaaorhdtgjorvly.supabase.co and confirm OK. The package TXT also contains this domain.

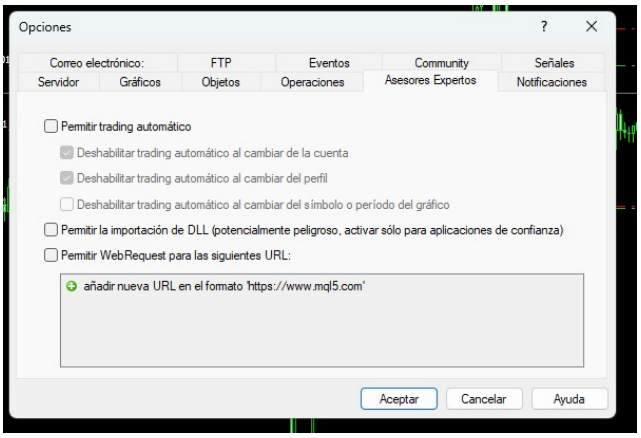

This authorizes validation connectivity; it does not replace LicenseKey. Keep the full validation endpoint in LicenseAPI_URL as supplied.

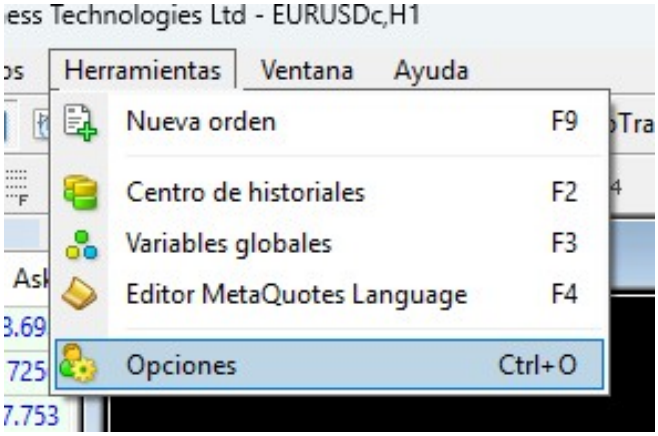

One screenshot also shows DLL imports selected. That is a separate permission, not required for this WebRequest step; leave it unchecked for this setup.

Use one managing copy per pair. A local test must not simultaneously manage the same trades as a VPS.

Actual terminal screenshots. Spanish labels are retained; see the English menu equivalents below.

Menu equivalents: Archivo = File; Abrir carpeta de datos = Open Data Folder; Asesores Expertos = Expert Advisors; Actualizar = Refresh; Observación del mercado = Market Watch; Aceptar = OK.

Other labels: Parámetros de entrada = Inputs; Común = Common; Operaciones = Trade; Bajo = Low; Licencia vigente = Valid license; TRADING NO PERMITIDO = Trading not allowed.

8. Validate the live license

F7 > Inputs: enter your personal key in LicenseKey (Licencia para cuentas reales in the screenshot), then OK. Keep trading permissions off while checking validation. Never expose your key in screenshots.

A missing-key notice indicates that authorization is required. Licencia vigente means an active/valid license, but trading permission can remain off. Authorization and trading permission are separate checks.

This live account already had positions. Counters do not prove they were opened during the walkthrough; local trading was not needed to document validation.

When ready, review account/inputs, enable F7 > Common > Allow live trading and platform AutoTrading. Check the warning clears; otherwise inspect Experts/account permissions.

Actual terminal screenshots. Spanish labels are retained; see the English menu equivalents below.

Menu equivalents: Archivo = File; Abrir carpeta de datos = Open Data Folder; Asesores Expertos = Expert Advisors; Actualizar = Refresh; Observación del mercado = Market Watch; Aceptar = OK.

Other labels: Parámetros de entrada = Inputs; Común = Common; Operaciones = Trade; Bajo = Low; Licencia vigente = Valid license; TRADING NO PERMITIDO = Trading not allowed.
