1. Download, extract and install the MT5 file

Download TRIDENT_FX_MT5.zip. Right-click > Extract All in Windows. Open the extracted TRIDENT_FX folder, then MT5/TRIDENT_FX.ex5. MT4 and MT5 packages are different.

In the intended MT5 installation, choose File > Open Data Folder > MQL5 > Experts and copy TRIDENT_FX.ex5. Each installation can have a separate data folder.

Keep the ZIP as backup; do not copy it into Experts. Documentation is in Manuales (Manuals). The shared manual explains account requirements and inputs.

Begin on demo and keep algorithmic trading off while preparing. Live licensing uses Mercado Pago; PayPal is coming soon. Demo use remains free.

Menu equivalents: Archivo = File; Abrir carpeta de datos = Open Data Folder; Asesores Expertos = Expert Advisors; Actualizar = Refresh; Observación del mercado = Market Watch; Aceptar = OK.

Other labels: Parámetros de entrada = Inputs; Común = Common; Operaciones = Trade; Bajo = Low; Licencia vigente = Valid license; TRADING NO PERMITIDO = Trading not allowed.

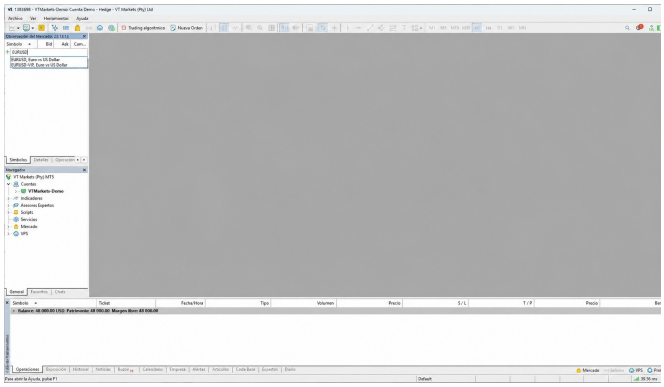

2. Show the EA and portfolio symbols

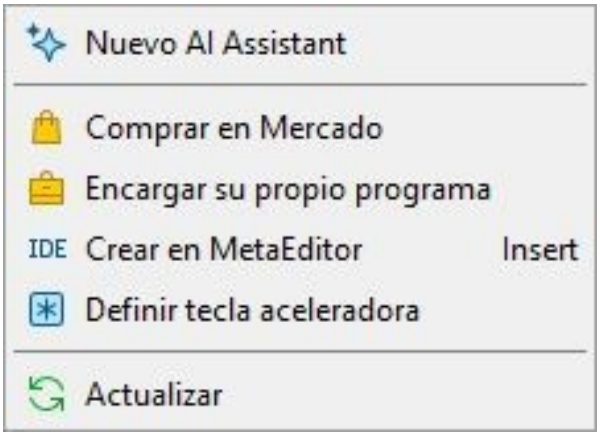

Navigator (Ctrl+N): right-click Expert Advisors > Refresh. Expand the list and locate TRIDENT_FX.

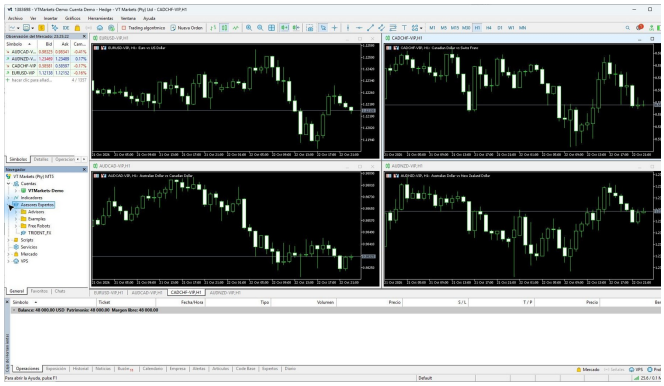

In Market Watch, use click to add and select your broker's symbols. The screenshots use the -VIP suffix.

Base portfolio: EURUSD, AUDCAD, CADCHF and AUDNZD. Retain the full broker symbol name and suffix.

Actual terminal screenshots. Spanish labels are retained; see the English menu equivalents below.

Menu equivalents: Archivo = File; Abrir carpeta de datos = Open Data Folder; Asesores Expertos = Expert Advisors; Actualizar = Refresh; Observación del mercado = Market Watch; Aceptar = OK.

Other labels: Parámetros de entrada = Inputs; Común = Common; Operaciones = Trade; Bajo = Low; Licencia vigente = Valid license; TRADING NO PERMITIDO = Trading not allowed.

3. H1 and initial settings

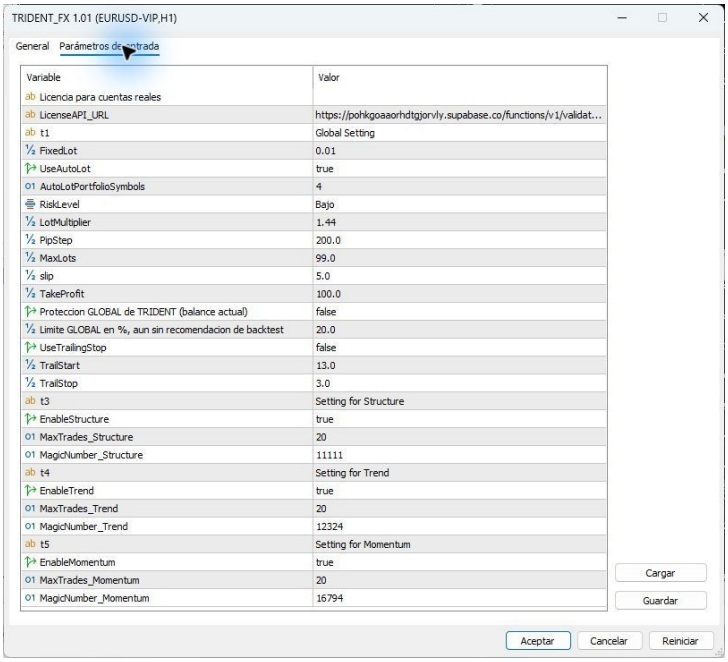

Open one chart per symbol, select H1, attach TRIDENT_FX and check inputs on every chart.

The example uses 48,000 standard USD, AutoLot and LOW: UseAutoLot=true, AutoLotPortfolioSymbols=4, RiskLevel=RISK_LOW. All three engines are enabled.

48,000 USD applies to this account type and portfolio. Cent accounts use different balance units/contracts; consult the shared manual. Configuring only one chart is insufficient.

Global protection is off in this example. Its default threshold is not a recommended loss percentage.

Actual terminal screenshots. Spanish labels are retained; see the English menu equivalents below.

Menu equivalents: Archivo = File; Abrir carpeta de datos = Open Data Folder; Asesores Expertos = Expert Advisors; Actualizar = Refresh; Observación del mercado = Market Watch; Aceptar = OK.

Other labels: Parámetros de entrada = Inputs; Común = Common; Operaciones = Trade; Bajo = Low; Licencia vigente = Valid license; TRADING NO PERMITIDO = Trading not allowed.

4. Enable individual and general permissions

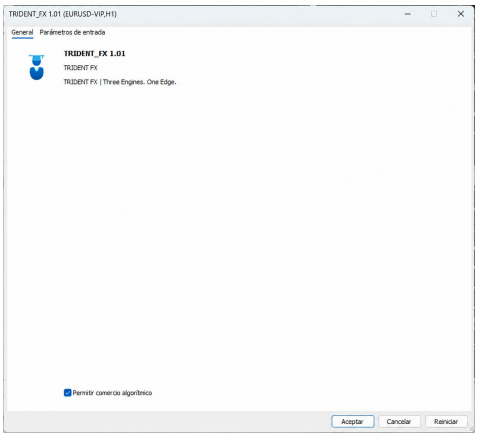

In each EA's properties, enable its Allow Algo Trading permission. Keep the MT5 general button off until preparation is complete.

With the general button off, TRADING NO PERMITIDO remains visible. No commercial license is needed on demo.

After reviewing account, capital, H1 and inputs, activate Algo Trading or press Ctrl+E. In the documented setup the indicator turned green and the notice cleared.

Actual terminal screenshots. Spanish labels are retained; see the English menu equivalents below.

Menu equivalents: Archivo = File; Abrir carpeta de datos = Open Data Folder; Asesores Expertos = Expert Advisors; Actualizar = Refresh; Observación del mercado = Market Watch; Aceptar = OK.

Other labels: Parámetros de entrada = Inputs; Común = Common; Operaciones = Trade; Bajo = Low; Licencia vigente = Valid license; TRADING NO PERMITIDO = Trading not allowed.

5. Check all four charts

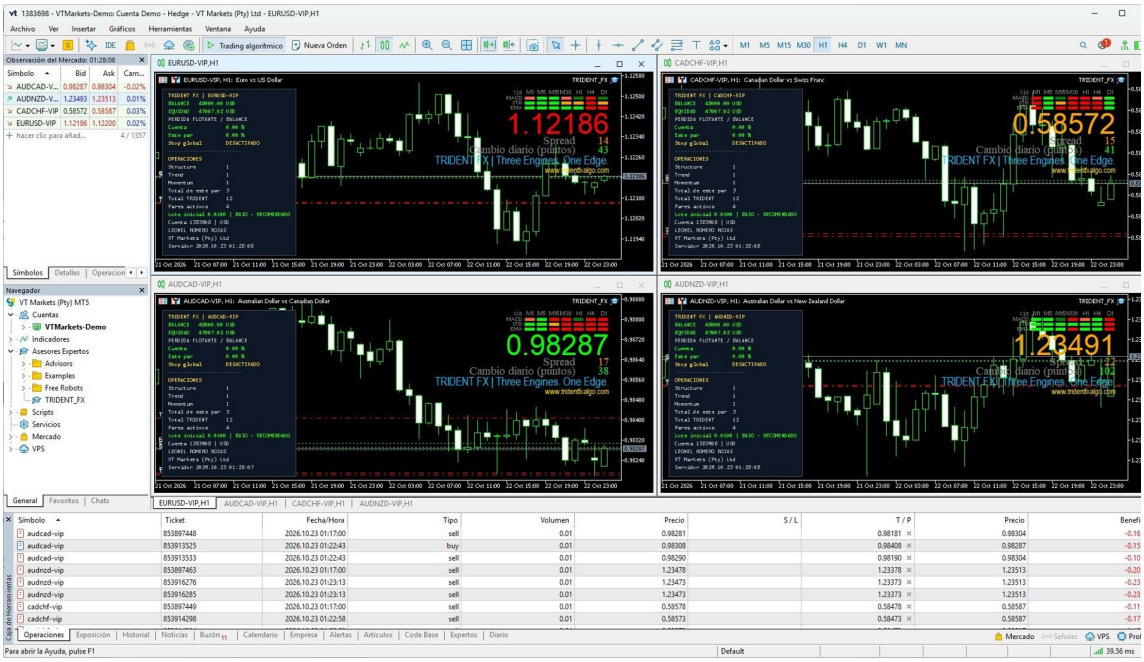

Use Window > Tile to see the portfolio. The screenshot shows four H1 charts with the EA active and open positions on demo.

Check: general trading enabled; chart symbols and H1; panels and trade lines; per-symbol and total counts; Trade tab types and volumes.

At capture time there were three positions per pair, twelve total, one per engine on each symbol. This is an example, not a guaranteed number or entry time.

Maximize a chart to inspect figures/lines. The tiled view is an overview.

Actual terminal screenshots. Spanish labels are retained; see the English menu equivalents below.

Menu equivalents: Archivo = File; Abrir carpeta de datos = Open Data Folder; Asesores Expertos = Expert Advisors; Actualizar = Refresh; Observación del mercado = Market Watch; Aceptar = OK.

Other labels: Parámetros de entrada = Inputs; Común = Common; Operaciones = Trade; Bajo = Low; Licencia vigente = Valid license; TRADING NO PERMITIDO = Trading not allowed.

6. Understand positions and the panel

The enlarged view connects chart lines with the panel and Trade table. Structure, Trend and Momentum count their recognized trades. Total de este par is this symbol; Total TRIDENT is the portfolio; initial lot shows the calculated base.

Entry and T/P lines mark opening and target prices. Read exact values by ticket in Trade; avoid dragging lines while inspecting.

Floating results change with the market. Balance records realized results; equity includes floating results. 0.00% may be a small rounded figure, not exactly zero dollars.

Enabling trading does not guarantee immediate entries. Read warnings and recent Experts messages. Refer to the manual before live use.

Actual terminal screenshots. Spanish labels are retained; see the English menu equivalents below.

Menu equivalents: Archivo = File; Abrir carpeta de datos = Open Data Folder; Asesores Expertos = Expert Advisors; Actualizar = Refresh; Observación del mercado = Market Watch; Aceptar = OK.

Other labels: Parámetros de entrada = Inputs; Común = Common; Operaciones = Trade; Bajo = Low; Licencia vigente = Valid license; TRADING NO PERMITIDO = Trading not allowed.

7. Live-account validation connection

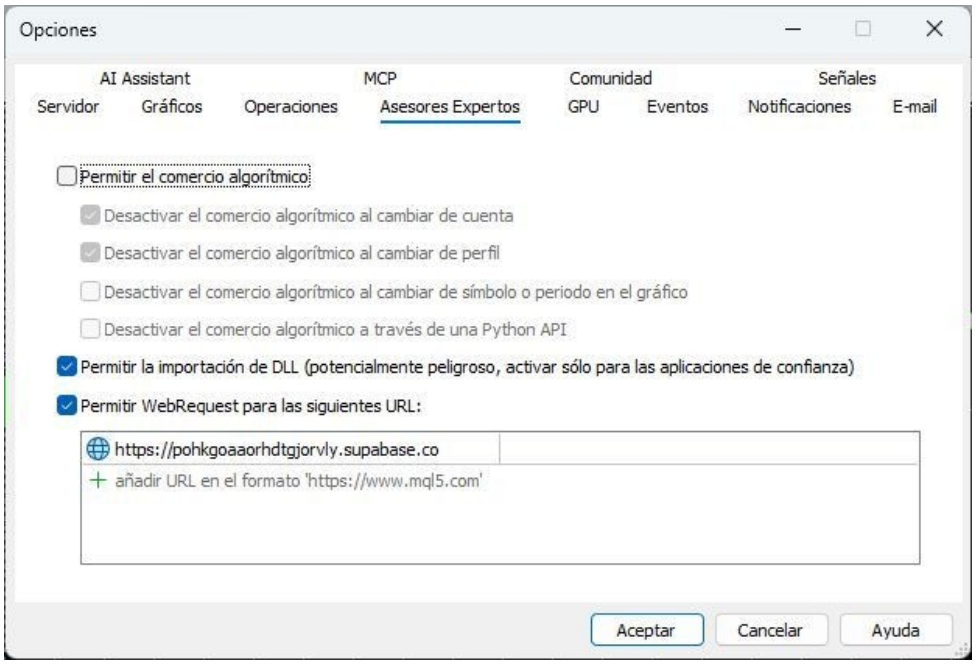

Tools > Options > Expert Advisors > Allow WebRequest for listed URL: add https://pohkgoaaorhdtgjorvly.supabase.co and enable the checkbox. The close-up shows the URL row.

Algorithmic trading is off in the screenshot because live trading was not activated for this walkthrough. To operate when ready, review the individual permission and enable both it and the general MT5 button.

The allowed URL is connectivity authorization, not a license. Check key, linked account and validation notice afterwards. Keep the full endpoint in LicenseAPI_URL.

DLL imports are separate from this WebRequest step; their visible checkbox is not a requirement to enable them.

Actual terminal screenshots. Spanish labels are retained; see the English menu equivalents below.

Menu equivalents: Archivo = File; Abrir carpeta de datos = Open Data Folder; Asesores Expertos = Expert Advisors; Actualizar = Refresh; Observación del mercado = Market Watch; Aceptar = OK.

Other labels: Parámetros de entrada = Inputs; Común = Common; Operaciones = Trade; Bajo = Low; Licencia vigente = Valid license; TRADING NO PERMITIDO = Trading not allowed.

8. License and final checks

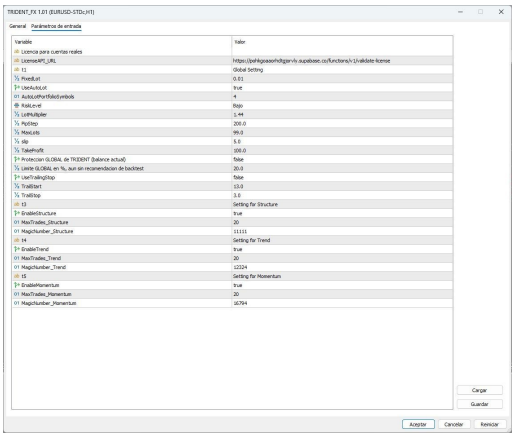

In EA properties (F7), enter LicenseKey, shown as Licencia para cuentas reales, then OK. The photographed field is empty; never share the actual key.

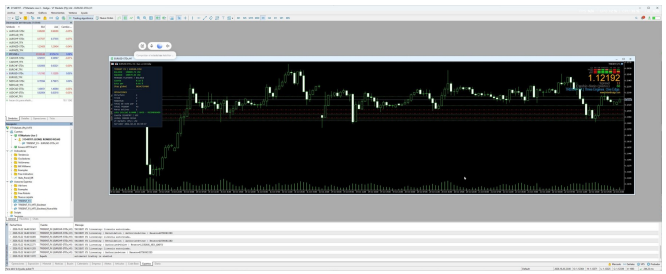

Missing key: the EA says a license is required. Valid key with trading off: licensing can succeed while permission to trade remains disabled.

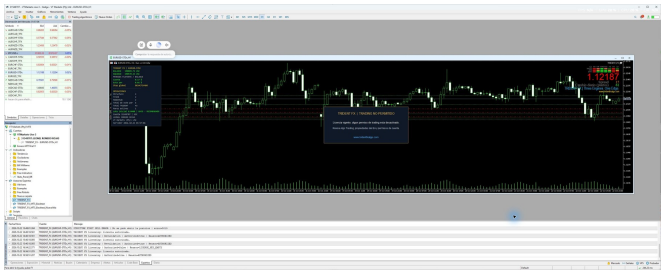

After reviewing license, capital and inputs, enable individual permission and the general button. In this setup the warning cleared and the panel recognized existing EURUSD positions with LOW.

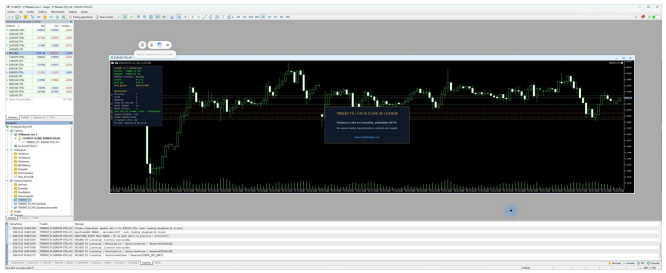

This verifies the documented configuration, not future performance or permission for two copies to manage together. Use one manager per pair. Disable a local test copy before returning management to the VPS.
